District wise Total Fish Production in Inland Water of Bangladesh, 2012-13

## PREFACE

**Fisheries Statistical Report of Bangladesh** is designed to provide statistical information of diversified fisheries resources and their contribution in fisheries production in Bangladesh for the fiscal year 2012-13. Considering the importance we have tried to furnish the accurate information on different areas of fisheries production in Bangladesh. The book is aimed to work as a source of information for the decision makers, planners and development partners who are intended for the advancement of fisheries sector in Bangladesh. It is also expected that the report might offer useful information to students, researchers, non-government organizations, private entrepreneurs and related government departments.

This book is a unique yearly publication of Department of Fisheries (DoF), Bangladesh since 1983. This book is 30th edition containing updated fisheries statistical information. The data accumulated in this publication has been collected in various ways, such as field survey, fish landing station records, data from DoF field offices, reports of different projects of DoF and statistics of other concerned departments. The collected information has been presented in the simplest way in this report after necessary analysis and scrutiny. The valuable feedback from other concerned agencies and persons has also been accounted during the process of data.

With respect to the previous collection of the book, this edition contains several improvements. The information of the publication has been presented in the form of table and figure, which is easily understandable to general readers. The production of fish and shellfish from different water bodies has been presented on account of country, division and district basis. The comparison of production from various resources has also been added.

Different related organizations have enriched the publication by providing valuable resource based fisheries production information. It gives me pleasure in expressing my heartfelt gratitude to them for their valued contributions. I would also like to convey my thanks to my colleagues of who have rendered any valued suggestion for improvement of the book will also be appreciated tireless efforts to make this publication attractive and useful.

(Syed Arif Azad)  
Director General (Addl. Charge)  
Department of Fisheries  
Bangladesh

## **ACKNOWLEDGEMENTS**

It is a regular publication of the Department of Fisheries Bangladesh and this one is the 30<sup>th</sup> annual publication. This book contains detailed yearly fisheries production information of Bangladesh, which would be useful for national, regional and global fisheries development planning. The Fisheries Resource Survey System (FRSS) wing received co-operation and assistance in various ways from relevant stakeholders during the preparation of this publication. The wing is grateful to all of them although it is not possible to convey gratitude to everyone by name.

I take the opportunity to offer my heartfelt acknowledgement, deepest sense of gratitude and profound regards to respected Director General, Department of Fisheries (DoF) for his scholastic guidance, sympathetic supervision, valuable advice and constructive criticism in all phases of the data collection and the preparation of this report.

It gives me great pleasure to express my sincere gratitude and deepest sense of appreciation to my colleagues of Fisheries Resource Survey System for their untiring efforts, cordial assistance and appreciable information throughout the data collection process and during formulation of this publication.

I would like to extend my sincere and deep gratefulness to Bangladesh Fisheries Development Corporation (BFDC) and Forest Department (FD) for providing necessary data on kaptai Lake and Sundarbans respectively for this publication.

I would also like to expresses my cordial thanks and gratitude to all the members of the Editorial Committee headquarter and field level colleagues of our Department for their assistance and co-operation during the preparation of the report.

Any suggestion written or oral, for any improvement of this book will be highly solicited.

(**Sk. Mustafizur Rahman**)

## Fisheries Sector of Bangladesh: Development Potentials and Challenges

Bangladesh has achieved remarkable progress in the fisheries sector since its independence in 1971. Fisheries have been playing a very significant role and deserve potential for future development in the agrarian economy of Bangladesh. This sector contributes 4.37% to the national GDP and almost one-fourth (23.37%) to the agricultural GDP (Bangladesh Economic Review 2013). In recent years, this sector performs the highest GDP growth rate in comparison to other agricultural sectors (crop, livestock and forestry). The growth rate of this sector over the last 10 years is almost steady and encouraging, varying from 4.55 to 7.32 percent with an average 5.49 percent.

Whereas last five years average growth rate of this sector is 5.88 percent. The country's export earnings from this sector is 2.01% in 2012-13. The sector's contribution to the national economy is much higher than its 4.37% share in GDP, as it provides about 60% of the animal protein intake and more than 11% of the total population of the country is directly or indirectly involved in this sector for their livelihoods.

Bangladesh is one of the world's leading fish producing countries with a total production of 34.10 lakh MT in the last fiscal 2012-13. According to available statistics, it is found that the total fish production of the country shows a consistently increasing trend during the last 30 years. Over the stipulated period the fish production is increased almost five times (7.54 lakh MT in 1983-84 to 34.10 lakh MT in 2012-13). The overall growth performance from inland aquaculture shows a credible increasing trend (1.17 lakh MT in 1983-84 to 18.60 lakh MT in 2012-13) due to

dissemination of improved technology packages and supportive/need-based extension services at farmer's level. A slight growth in the production from both inland capture and marine fisheries was also noticed during the last two and half decades with some exceptions.

The diversified fisheries resources of the country are divided into three groups, i.e., inland capture, inland culture and marine capture. Inland culture includes mainly pond/ditch, baor, shrimp/prawn farm, seasonal cultured water-body etc. covering an area of about 7.83 lakh ha and produces 18.60 lakh MT fish and shrimp in the 2012-13. Though the closed water area is only about 16.5% of the total inland water-bodies, but almost 55% of the total yield comes from inland aquaculture. This is the output of using improved technology disseminated by the Department of Fisheries (DoF). In addition vast paddy fields have enormous potential for rice-fish farming. Considering the agro-ecological context of the country, there is a wide scope of flourishing the fisheries resource potentials both at vertical and horizontal dimensions. Realizing the sector potentials, government/DoF along with development partners and NGOs has implementing different initiatives to maximize fish production in a sustainable manner.

Bangladesh is blessed with huge open water resources with a wide range of variations in nature. But due to mainly decline and degradation of resources, the share of inland capture fisheries has been reduced remarkably during the two and half decades. In 1985-86, the contribution of inland capture and culture fisheries to total fish production were 55.7% and 18.2%, respectively; whereas in 2012-13 inland capture fisheries contributes only 28.2% to total fish production. At present improved biological management is the first priority in the development policy that will restrict the declination of resources and enhance production.

The major current and future challenges of the sub sector include- gradual resource depletion (inland open water); deteriorating brood stock, and scarcity of good quality seeds and production inputs; increasing water-logging, blocking migratory routes of indigenous fish species, disturbing biodiversity and creating social conflicts; scarcity of good quality and virus-free shrimp post larvae (PL); salinity intrusion in estuarine rivers and obstructing the migratory routes due to increased silt deposit on the river channels; stock assessment of marine fishery resources; fishers access to public water bodies; alternative livelihoods support to fishers during banned fishing seasons and sanctuary maintenance; etc.

To address the current challenges, several socio-eco-friendly programs have been implemented to increase the productivity of inland open waters in the recent past years. These programs includes mainly- community based fisheries management, establishment of beel nurseries, stocking of fingerlings including endangered species, restoration of habitats, establishment and maintenance of sanctuaries, expansion of cage and pen farming in feasible water areas, introduction of coordinated management approach, issuing of fishers identity card and enforcement of fish conservation acts. As a result in many cases fishers' rights were established and they were motivated for biological management rather than only catching of fish. With the continuation of community based fisheries interventions, a strong partnership has been developed among the concerned stakeholders, i.e. GO, NGO, local elites and fishers, at implementation level. The main objective of this program is to improve the livelihood of fishers and other stakeholders through increased income and supply of animal protein.

To conserve the aquatic biodiversity, specially fish and other aquatic species diversity in open water, a set of technical interventions like establishment of fish sanctuaries, fish habitat restoration etc. have been undertaken during the recent past years. Establishment of aquatic sanctuary is one

of the effective tools for conserving fish stock, protecting biodiversity and increasing fish production. Due to establishment of fish sanctuaries (more than 500 throughout the country), a substantial increase in fish production as well as abundance of endangered species was found in those water bodies, which ultimately enhanced the aquatic bio-diversity. Besides, for the conservation and development of hilsa fishery five sanctuaries were established in the selected river system. On the other hand, to ensure fish migration during the breeding period excavation and re-excavation of different connecting canals of rivers, dead rivers and beels were performed during the recent years.

Hilsa (Ilish) is the national fish of Bangladesh. More than 10% of the country's total fish production comes from hilsa. To achieve the increased target of hilsa production, the government has been implementing a unique coordinated management program to protect jatka and brood hilsa. The objective of this program is to aware all stakeholders regarding the importance of hilsa fishery in our national economy. A comprehensive program has also been executed for the protection of the renewable natural resources ensuring the participation of all stakeholders including local public representatives, DoF, local administration, Coast Guard, Bangladesh Navy, fishers and mass people residing the hilsa rich river system. Jatka or hilsa fishers were provided with food-grains to live with and inputs to start alternative income generating activities. As a result, hilsa production increased from 1.99 lakh MT in 2003-2004 (starting of the on-going program) to 3.51 lakh MT in 2012-13.

Shrimp is one of the major export items in Bangladesh. To fulfill the extended export demand of shrimp and shrimp products, shrimp culture has been promoted with the increase of shrimp farm area from 1.41 lakh ha in 2002-03 to 2.75 lakh ha in 2012-13, which results in the concomitant increase of shrimp farm production from 0.67 lakh MT in 2002-03 to 1.34 lakh MT in 2012-13. Total shrimp and prawn production including capture has been increased from 1.60 lakh MT in 2002-03 to 2.32 lakh MT in 2012-13. Different programs and development projects are also being implemented for the increased production and promotion of shrimp aquaculture.

Bangladesh exports frozen shrimp and other fish and fisheries products to a number of developed countries by properly addressing international food safety regulations throughout the supply chain. The present government has maintained good quality in all stages of fish and shrimp production, processing and export. In 2012-13 Bangladesh earned Tk. 43126 million by exporting almost 85 thousand MT of fish and fisheries products. The present government emphasizes on the hygienic and safe fish supply in the domestic market of the country as well. DoF has strong monitoring on the food supply chain to ensure food safety of the consumers. At the same time DoF has undertaken awareness program for the fish whole sellers and retailers throughout the country to improve their knowledge and skill in hygienic and safe food supply.

Bangladesh possesses vast marine water resources. Despite the abundance of marine waters, only about 17.3% of country's total fish production is contributed by the marine sector. The present democratic government sets utmost priority regarding the protection, conservation and biodiversity of marine and coastal resources. As a result, the Saint Martin Island and the Sundarbans, the world famous mangrove forest, have been declared as sanctuaries to develop and protect the fisheries resources as well as biodiversity of that area. The government also has declared a marine reserve (covering 698 sq. km) in the Bay of Bengal to protect and preserve the breeding grounds of marine flora and fauna.

Human resource development is mandatory for DoF to build up administrative, management and technological capacity in fisheries sector. For this purpose regular training programs are being conducted from both revenue and development budget to develop skill of concerned personnel, which includes DoF officials, fishers, fish farmers, entrepreneurs, unemployed youths, distress women, landless and marginal farmers etc. For the sustainable development of fisheries sector, government has already approved the National Fisheries Strategy (NFS) which is developed under the guidance of National Fisheries Policy 1998 (NFP). This strategy comprises 8 (eight) building-block sub-strategies and action plans to cover the different field of fisheries sector. On the basis of action plan/work plan formulated by DoF, different programs and projects are going-on to achieve the target of the sub-strategy.

Bangladesh fisheries has ample scope of development to strengthen the national economy. Concerned government departments, development partners, researchers and non-government organizations can play important role in the wide-ranging advancement of the fisheries sector. For the overall development and management of fisheries sector, DoF formulates and implements development projects under the revenue and development budget toward the sustainable utilization of fisheries resources to ensure food security. For the better planning accurate fisheries statistical information is prerequisite. The yearbook is published with the objective of providing necessary and precise fisheries production information facilitating resource based fisheries planning by the related organizations.

**Table 1. Sector-wise Annual Fish Production in Inland and Marine Fisheries  
2012-13**
